

# ESG framework coverage

Each of the major ESG reporting frameworks has different levels of focus on the key ESG performance metrics.

Understanding which framework focuses on which indicator can help with framework selection and provide insights into where organizations may be able to report to multiple frameworks using existing data.

This matrix illustrates the focus areas for each reporting framework.

\*Environmental includes all elements that are not carbon, energy, waste or water. Examples include a focus on biodiversity, air quality, desertification and more.
